

Aim:

Write a program to find the `factorial` of a given number using **functions**.

At the time of execution, the program should print the message on the console as:

Enter a number :

For example, if the user gives the **input** as:

Enter a number : 5

then the program should **print** the result as:

Factorial of a given number 5 = 120

Note: Write the function **factorial()** in `Program704a.c`.

Source Code:

`Program704.c`

```
#include <stdio.h>
#include "Program704a.c"
void main() {
    int number;
    printf("Enter a number : ");
    scanf("%d", &number);
    printf("Factorial of a given number %d = %d\n", number, factorial(number));
}
```

`Program704a.c`

```
int factorial(int n);
int factorial(int n)
{
    int i,fact=1;
    for(i=1;i<=n;i++)
        fact=fact*i;
    return fact;
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter a number : 3
Factorial of a given number 3 = 6

Test Case - 2
User Output
Enter a number : 6
Factorial of a given number 6 = 720
